**Test Conducted:**

The Test, Specified in Schedule 4 Part I and Schedule 5 Part I of the Furniture and Furnishings (Fire) (Safety) Regulations, is based on BS 5852: Part 1: 1979.

To assess the ignitability of visible cover used in upholstered components when subjected to ignition **source 0 and 1**.

**General Information:**

|                                                      |                                                                              |           |                      |
|------------------------------------------------------|------------------------------------------------------------------------------|-----------|----------------------|
| Materials                                            | Fabric                                                                       | Weight    | 347 g/m <sup>2</sup> |
| Soaking Condition:                                   | <input checked="" type="checkbox"/> YES (BS5651,specified in UK Regulations) |           |                      |
| Precondition                                         | Indoor Ambient Condition                                                     |           | 72 h                 |
| Conditioning of Test Specimen and Ignition Source(s) | Temperature: (23±2) °C;Relative Humidity: (50±5) % Duration:24 h;            |           |                      |
| Testing Enclosure (fume cupboard / room)             | 23.7 °C                                                                      | RH 58.4 % | ---                  |

**Test Results:**

The following test results relate only to the ignitability of the combination of materials under the particular condition of test. They are not intended as a means of assessing the full potential fire hazard of the materials or products in use.

**(A) Smoldering Cigarette Test (ignition source 0)**

| Criteria                                                                                                                              | 1 <sup>st</sup> test | 2 <sup>nd</sup> test |
|---------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------|
| 9.2.3) Whether the evidence of progressive smouldering or flaming is observed in the interior and/or cover                            | NO                   | NO                   |
| 9.2.4) Whether progressive smouldering or flaming of the sample is observed at any time within one hour of placement of the cigarette | NO                   | NO                   |
| 9.2.5) Whether progressive smouldering is observed on final examination when dismantle assembly and examine internally                | NO                   | NO                   |

**Test Details:**

The filling material for Schedule 4 Part I was non-fire retardant polyurethane foam corresponding to the specification set out in BS 3379 Type B Hardness grade 130 and of a density of 20-22 kg per m<sup>3</sup>.

| Test            | Ignition Source | Time to extinction after placement of the cigarette |                           |                     |
|-----------------|-----------------|-----------------------------------------------------|---------------------------|---------------------|
|                 |                 | Progressive Smouldering Time(second)                | Flame Ceased Time(second) | Smoking Ceased Time |
| 1 <sup>st</sup> | 0               | 0                                                   | 0                         | 18min23s            |
| 2 <sup>nd</sup> | 0               | 0                                                   | 0                         | 18min55s            |

**Sub-Conclusion: PASS**
